I'm interested in developing **websites** for you.

Basic Information

Irrelevant Bachelors'
Degree in English
[Gallaudet University](#)

Been developing &
designing websites
since 12 years old.

I want to work with you because it'll be fun, crazy, and filled with hard work. I develop for the web because it's challenging. Because it's always something new everyday.

- Guided departments with branding

Information Technology Assistant
2009 August - 2011 May

[Gallaudet University](#)

- Hand-coded new web layouts
- Developed dynamic, interactive modules

It's always in the details. Commit early and often because shipping is hard if you don't. Flat design is useful. Write modular CSS. Convention over configuration. Follow HTML5 Standards. caniuse.com. Designer News & Hacker News. SASS & HAML are excellent tools but not if you don't know CSS & HTML. Vanilla JS when you can. Angular JS. Dribbble for design, Github for code. Share your stuff because you want to use others'. A List Apart, the Smashing Magazine. Sublime Text 3. ZSH. Command Line is my sword and my knowledge my shield. Sometimes clients know what they want, sometimes you have to decide what it is that they want. But in the end it's always about the content because how else can the world find you? I do this because web is my craft and my art. And, of course, CSS3 animations.
